

Businesses That Started in Co-Working and Co-Manufacturing Spaces

Globally popular businesses that began in co-working spaces include:

Uber

Instagram

Indiegogo

Spotify

Hootsuite

Wanderfly

Ezeep

All of these businesses benefited from:

Flexibility to affordably scale as needed without being constricted by long-term leases

The opportunity to network with likeminded professionals and discover new ways to solve problems

Having easy access to other professionals and brand development resources

High-quality amenities available through community membership

Why Does Co-Manufacturing Make Sense for New Manufacturing Businesses?

Entrepreneurs that require manufacturing or warehousing facilities might not realize there are co-working solutions tailored specifically to their needs. MAC6 is one of a handful of co-working communities that has dedicated shared light manufacturing and warehousing space available.

Light co-manufacturing memberships work similarly to regular co-working membership, and includes benefits like:

Air conditioned and fully serviced facilities

Power, compressed air and natural gas availability

Shared offices and meeting rooms

Easy-to-use truck bays, loading docks and shipping facilities

Unique shared clean room facilities

Memberships starting at just \$1.50 per square foot/month (starting at 1,000 sq. ft.)

The ability to easily increase your space as needed
